Success in today's competitive environment means your business must stay focused on core competencies. By working with OTS we can help your business maintain cost effectiveness and provide stable and innovative systems to meet the challenging days ahead.

These 15 years of history are the most convincing evidence of OTS's stability and quality of our services, but we are looking for more opportunities in the future, valuable experience in technology and outsourcing area along with the professionalism and talent of our employees accumulated during the decade within the IT.

Think Globally, Act Globally.

Services

Custom software development
We comply with the latest development and technology standards, apply cutting edge software engineering methodologies and integration procedures adjusted to every specific case.

Design, redesign, support, integration and maintenance of custom software
We are ready to go an extra mile to be always at hand when support, maintenance or our creative activity to perform design or redesign is required.

Software testing
We provide our customers with the important information about the quality of their software or our product that is planned to be used for their purposes. Our usage of advanced testing procedures ensures software positive performance.

Information technology consulting
To make offshore software development efficient and reduce the related costs our customers often request process and technology consulting that prove to be of considerable use to them while building a productive model of software development outsource.

Writing technical documentation
We also offer compiling technical documentation for the software we develop. Software documentation serves as a detailed explanation of the application functions.

Custom web-design and original artwork
Supplying our clients with custom web design services we help them individualize their business and make it stand out of the crowd.

OTS predominantly specializes in developing software based on Java, PHP, C++, Ruby on Rails, Groovy on Grails technologies and mobile development. However, we have accumulated experience in a wide range of other technologies like Perl, Python.

While working on the projects we get in close touch with the corresponding professional sphere and scrutinize its every aspect specific for the software under development. That is why, OTS possesses deep knowledge and broad practical experience in such industries as printing, eCommerce, product life cycle management, postal services, banking sector, etc.

We welcome every opportunity to be helpful to our customers in everything regarding software development. Working with every single client we apply the latest development standards and innovative technologies and offer various methods of work. OTS, we'll be able to work out the model suitable for you!

OPEN SOURCE is the FUTURE....

opensource
Products

Apart from being engaged in offshore software development projects and outsourcing IT services for our global customers we succeed in finding time and resources to develop our own products and take pleasure in making them highly competitive, valuable and innovative. We endeavor to implement our creativity and technological ideas in our own products, some of which are open source.

Responsibilities
Intrusion detection and firewall
Security policy and enforcement
Identity and access management
Security consultations

professional
Services

Linux and Open Source software is widely regarded as a stable, secure, and cost effective platform for running business applications. While most companies use Linux in some form as a server or network platform there is also interest in Linux as a desktop, kiosk, and for other user facing components.

Linux arrived in the business world through many avenues. It may have arrived formally through software or solution providers who required Linux as an application or database platform. It may have also arrived in a more grass-roots way. IT staff may have used Linux to solve problems without dealing with budget or license constraints. In many cases the person who brought Linux into the data centre has moved on and you need to understand and manage these systems. This is where Net Direct's Linux solutions can help.

OTS has been providing Linux and Open Source solutions to businesses since 1998. We have years of experience installing and supporting a wide range of Linux solutions from application and database servers to email and web servers to desktop and VoIP PBX systems.

OTS provides a wide range of solutions including:

:: **File/print**	:: **Email/collaboration**
:: **LDAP directory**	:: **Web Services**
:: **Linux Desktop deployment**	:: **High Availability**
:: **Backup/Recovery**	:: **Clustering**
:: **VoIP PBX**	:: **Spam/Virus filtering**
:: **Network Monitoring**	:: **Web content filtering**
:: **Microsoft integration**	:: **Thin Clients**
:: **Firewalls**	:: **Consolidation**
:: **Virtualization**	:: **and more...**

what we do:

Deployment and Systems Integration – We design, build and integrate systems entirely or mainly from Open Source components.
24 hour Support – We give you the confidence to use Open Source software with our expertise backing you when you need it.
Managed Service – We use Open Source software to provide a solution that meets your specific technology need.
Strategic Consultancy – We help you identify opportunites to benefit from what Open Source can do for you.
Outsourcing – We look after your technology investments, including but not limited to Open Source, for you.
Training – We pass on our expert knowledge on specific Open Source products.
